

DIVER COMMS ROPE

The C-Tecnics super-flexible, low diameter, comms rope is ideal for commercial divers using full-face masks such as AGA Divator masks. The comms rope is interwoven in such a way that the strain is not put on the 4 communication wire but onto the rope, reducing the breakage potential of the comms wires. The rope also provides extra safety as a recovery line with a breaking strain of 650kg and also used to communicate with the surface using pull signals. The comms rope can be terminated with any electrical connector, but is normally stocked with the 'marsh marine style' of 4 pin connector.

Stock lengths are 50m, 75m & 100m lengths. A slip ring reel for storage and ease of operation can also be supplied.

Specification

Inner core

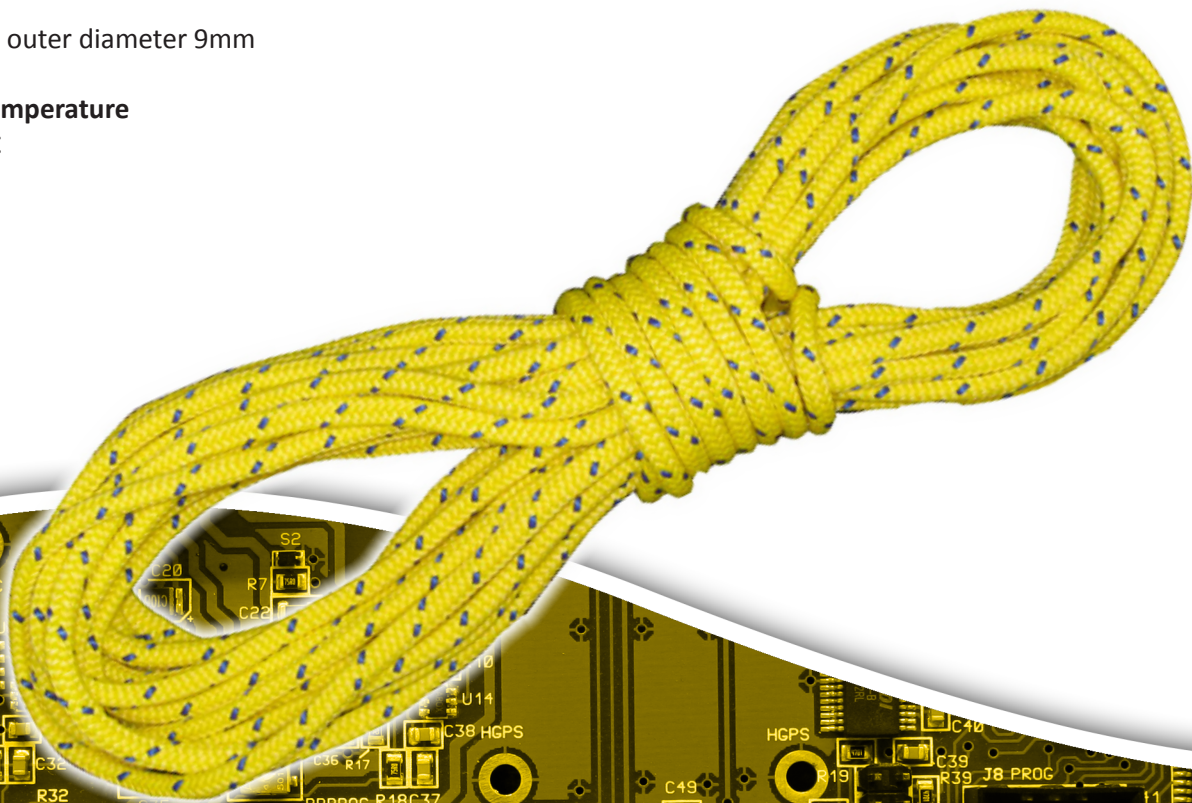

4 core in the following configuration, 2x 0.5mm², conductor linear resistance 41 Ω /km max at 20°C

Outer

Yellow Braid, outer diameter 9mm

Operating temperature

-10 to +60°C

C-Tecnics Ltd.
